EDUCATION

Asia Pacific University — **March 2023 – February 2026**

- Bachelor of Engineering with Honors in Computer Science
  - **CGPA: 3.08**

INTERNSHIP

Web Developer Intern – PT Setrakarya Manunggal — **December 2024 – May 2025**

- Developed a **Trip Monitoring Mobile Application using Angular and Ionic** to digitalize transportation crossing operations and replace manual trip recording
- Designed and implemented the complete **trip lifecycle workflow (Setup, Login, Vehicle Entry, Trip Completion, Data Sync, Reporting)**
- Built an **offline-first architecture using SQLite**, synchronizing trip data to a web backend via **REST API**
- Developed backend services and web components using **PHP and MySQL**, including master data management, tariff configuration, and monitoring reports

PROJECTS

Web and Email Server (RHEL) — **April 2024**

- Built a local server environment using **VirtualBox**, deploying multiple VMs on **Rocky Linux and Ubuntu**
- Configured core network services: **BIND DNS, DHCP, Apache Web Server, Postfix & Dovecot email system**
- Implemented **SSL/TLS** to secure web and email communications
- Validated end-to-end functionality by enabling client access to hosted websites, email delivery, and user authentication

Cloud-based Property Management System — **October 2025**

- Developed a **cloud-based property management system** automating tenant management, service requests, and document handling
- Designed **role-based access control** for multiple user types
- Implemented a **hybrid cloud architecture** using **Amazon EC2**, **Application Load Balancer**, and **Amazon RDS (MySQL)** for core backend services
- Integrated **serverless workflows** with **AWS API Gateway, Lambda, and S3** for scalable file management
- Optimized performance using **pre-signed S3 URLs** and **event-driven image processing**, reducing backend server load

Geofence Security Patrol Verification System — **January 2026**

- Built an **offline-first mobile application** using **Ionic (Angular) & Capacitor**
- Implemented **GPS-based geofencing** with sequential checkpoints and **dwell-time validation** to verify guard presence
- Designed **local offline storage with SQLite**, enabling queued synchronization when connectivity is restored
- Integrated **Supabase** for authentication, database management, and secure data storage
- Added **hash-based integrity verification** to detect post-submission modification of patrol records
- Developed iteratively using a **risk-driven methodology (RUP)** and validated via **User Acceptance Testing (UAT)**

AWARDS

DEVMatch Hackathon – 1ST Place, Maschain Tourism Track **Sep 2024**
Kuala Lumpur

Frontend Developer & Backend Integrator for "DocTour", a medical tourism app. Built the UI using Flutter/Dart and supported MasChain Testnet API integration for secure, blockchain-based data management.

SKILLS

Worked with:

- Python
- C/C++
- Linux (RedHat)
- React
- Angular
- MySQL
- Agile Methodologies
- Leadership
- Critical Thinking & Problem Solving
- Public Speaking

LANGUAGES

Fluent in Speaking & Writing

- English
- Indonesian
- Malay

Intermediate in Speaking & Writing

- German
