PROFILE SUMMARY

Recent BSc Computer Science (Hons) graduate of a *dual degree* between APU Malaysia and De Montfort University (United Kingdom), winner of 1st place at DEVMatch Hackathon 2024 (a *blockchain*-based medical tourism app) and 2nd place at APU Entrepreneurship 2023. Experienced in digitalising operational needs through *offline-first* mobile apps that keep working without internet: a plantation Vehicle Logging System (during my *internship*), and a GPS *geofencing* Security Patrol Verification System as my *Final Year Project*. Also helped build a multi-role business platform with payment integration, plus several personal digitalisation projects. Keen to contribute to *full-stack development*, *cloud deployment* on AWS and applied AI. Proficient in English (IELTS 6.5) and German (B2 Certificate).

EDUCATION

Asia Pacific University of Technology & Innovation (APU), Kuala Lumpur, Malaysia March 2023 - February 2026
Dual Degree with De Montfort University (DMU), Leicester, United Kingdom
Bachelor of Science (Honours) in Computer Science | Second Class Honours, First Division | CGPA: 3.03

LANGUAGES

English: Fluent (IELTS 6.5) | **German:** Upper Intermediate (B2 Certificate) | **Indonesian:** Native | **Malay:** Fluent

WORK EXPERIENCE

Web Developer Intern | PT Setrakarya Manunggal (Karyamas Plantation Group) December 2024 - May 2025

- Developed a *Trip Monitoring* mobile app for logging vehicle crossings as the internship project.
- Designed an *offline-first* architecture, from data entry to reporting, that keeps working without internet (automatic sync).
- Built the backend for *master data* management, tariff configuration and operational monitoring reports.
- **Tech:** Angular, Ionic, SQLite, PHP, MySQL, REST API.

PROJECTS

Ivision Chatbot: WhatsApp Chatbot Platform for Businesses | github.com/ProPyro135/Ivision-Chatbot 2026 - Present

- Developing an automated WhatsApp *chatbot* platform integrated with each business's product catalogue and price list.
- Applied a *multi-tenant* architecture with PostgreSQL *Row-Level Security* (RLS) to isolate each business's data.
- Implemented data security through credential encryption (AES-256-GCM) and verification of incoming messages (HMAC).
- **Tech:** TypeScript, Next.js, Fastify, PostgreSQL, Redis, Supabase, Docker, WhatsApp Business API.

One Screener: Web Screener Tools for Stock, Forex & Gold 2026 - Present

- Developing a web app that *screens* Indonesia Stock Exchange (IDX) stocks, *forex* and gold against user-defined criteria, so market opportunities can be found without checking each one manually.
- Managing historical market price data while preserving data integrity, and displaying only metrics that have been measured.
- **Tech:** Python, Streamlit.

Propertus: Cloud-Based Property Management System | github.com/sqd2/Property-Management-System-AWS October 2025

- Built a property management system with four role-based *dashboards* for assets, payments and maintenance.
- Integrated a *payment gateway* (Stripe, Stripe Connect) for rent payments and automatic fund distribution.
- Secured system access with token-based authentication (JWT) and two-step verification (2FA/TOTP).
- Handled *deployment* on AWS (EC2, RDS, Lambda, S3), including cloud storage and automatic *thumbnail* generation.
- **Tech:** React, TypeScript, ASP.NET Core 8, MySQL, AWS, Stripe, Vercel.

Geofence Security Patrol Verification System (Final Year Project) | github.com/ProPyro135/GSM January 2026

- Developed a GPS *geofencing* mobile app to validate guards' patrol routes and attendance time at each checkpoint.
- Implemented *hash*-based verification to prevent tampering and preserve the integrity of patrol reports.
- Applied an *offline-first* architecture with automatic sync, *real-time* monitoring and report export.
- Managed the development lifecycle with the RUP methodology and validated the system through *User Acceptance Testing* (UAT).
- **Tech:** Ionic (Angular), Capacitor, Supabase.

Orb: 3D Globe Controlled by Hand Gestures | github.com/ProPyro135/Ivision-3d-Hand-track 2026

- Built a web app that controls a 3D globe in *real time* by detecting hand gestures through a camera.
- Supports multiple devices (webcam, Ultraleap sensor, mouse) with automatic *fallback* when a device fails.
- **Tech:** TypeScript, Three.js, MediaPipe, Vite.

AWARDS

1st Place, DEVMatch Hackathon (MasChain Tourism Track) Kuala Lumpur, September 2024

- Developer of "DocTour" (a *blockchain*-based medical tourism app), responsible for building the *User Interface* (UI) and integrating the system with the MasChain API.

2nd Place, APU Entrepreneurship Kuala Lumpur, November 2023

- Served as *Pitch Presenter* and *Concept Developer* for a gamified walking app that rewards users by distance travelled, and presented its value and market potential to the judging panel.

SKILLS

Programming Languages: TypeScript, Python, C, C++, C#, PHP, Dart
Frameworks: Angular, React, Next.js, Ionic, Flutter, .NET, ASP.NET Core
Database & Cloud: PostgreSQL, MySQL, SQLite, Redis, Supabase, AWS (EC2, RDS, Lambda, S3), Docker
Systems & Methodology: Linux, DNS, Apache, SSL/TLS, REST API, Agile, RUP
